

## Power for the Life of your Product

**ELEON Integrated Power: Custom energy system solutions to cost-effectively provide Power for the Life of your Product.** Based on DARPA-funded technology from Georgia Tech, ELEON's proprietary chip-scale power modules have twice the energy density of current batteries. ELEON will extend the useful life of many products, reducing or eliminating the need to replace batteries. Much smaller than micro-fuel cells for cell phones or laptops, our power supplies are combined with storage, generation, and charge control devices to meet specific power requirements for wireless network, consumer, and life safety products.

**Batteries are cheap. Replacing them isn't!**<sup>®</sup> A significant cost and limitation of powered electronic products is the labor required to change their batteries, due to operating lifetime and/or shelf-life limitations. Assembled and packaged as custom solutions or as drop-in replacements for existing batteries, ELEON power supplies solve these problems. For many applications, your customers may never have to change batteries again.

**Wireless Networks:** Short-lived batteries are a major impediment to widespread installation of many available sensor technologies for commercial, industrial, residential and military applications. ELEON Integrated Power supplies are built to extend the operating lifetime of many edge-of-network devices, reducing or eliminating the need to replace batteries.

**Consumer Products:** Traditional batteries are inconvenient to change and dispose of properly. ELEON is a clean, efficient power solution customized to meet the design life of your products. Your customers may never change batteries again.

**Life Safety Products:** Lives depend on your products. Traditional batteries have a shelf-life of less than five years. When emergency strikes, are your products ready? ELEON Integrated Power will keep your products fully charged and ready to use – whenever, wherever your customers need them.

ELEON will build a limited quantity of customized prototypes in 2008-09 for selected customers seeking the competitive advantages our power supplies will give their products. Contact [info@eleonpower.com](mailto:info@eleonpower.com) today to find out how ELEON Integrated Power can provide Power for the Life of your Product.
